-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Hoeft, et al. (6,758,490).

Hoeft discloses an airbag apparatus for a vehicle comprising an airbag whose upper end portion is fixed to a vehicle body over a longitudinal direction of the vehicle body between an upper portion of the vehicle body and an interior member in a vehicle compartment; an inflator; a folded portion formed by folding the airbag; and a turned-back portion formed by turning back a portion of the airbag positioned between the upper end portion and the folded portion so as to be provided with a first turned-back

portion positioned on the side of the vehicle compartment and a second turned-back portion positioned between the first turned-back portion and the folded portion, at least one of the first turned-back portion and the second turned-back portion being turned in between the folded portion and the vehicle body, see figure 4a. The second turned-back portion is set to be longer than the first turned-back portion such that an upper portion of the second turned-back portion is turned in between the folded portion and the vehicle body. The airbag has a plurality of inflating chambers arranged in a longitudinal- direction of the vehicle and a gas introducing passage which communicates with inlets at upper ends of the inflating chambers, respectively, and which extends along the longitudinal direction, and the second turned-back portion includes the inlets of the inflating chambers. The folded portion has a rolled shape obtained by winding the airbag from the lower end of the airbag toward the side portion of the vehicle compartment and folding the same. The first turned-back portion and the second turned-back portion press and open the interior member by inflation of the first turned-back portion and the second turned-back portion prior to inflation of the folded portion. The folded portion inflates so as to be close to the side portion of the vehicle compartment. Hoeft teaches the winding method of the airbag using the disclosed structure.
